

This infographic provides a brief overview of key dates that occur at the study, accruing LAO or AO, and participant level for CP-CTNet studies. These dates occur after DCP final study approval has been granted and Stars and Medidata Rave have been implemented for the study.

## Study Active Date

The **Study Active Date** is the "Active" status date indicated on the *Protocol Status Update Form* that is completed by the LAO. This is the first study-wide event that DMACC adds to the *CP-CTNet AQuIP Recruitment Journal - Study-Wide Events* eCRF in Medidata Rave.

## Site Open Date

The **Site Open Date** is the date that the accruing LAO or AO was activated to the study, which is the date that DMACC sends the *Confirmation of Site Activation* email. This is the first site-specific event that each accruing LAO or AO adds to the *CP-CTNet AQuIP Recruitment Journal - Site-Specific Events* eCRF in Medidata Rave. **Note:** The **Site Open Date** is the same as the site activation date.

## Pre-Screen Date

The **Pre-Screen Date** is the date that the accruing LAO or AO completed the *Pre-Screen Checklist* in Stars and obtained a Pre-Screen ID for the potential participant. Participants are pre-screened in Stars after they meet protocol-specific pre-screening criteria.

## Informed Consent Date

The **Informed Consent Date** is the date that the potential participant signed an informed consent document for the study. This date is entered into the *CP-CTNet Pre-Screening Form* in Medidata Rave.

## Screening Date

The **Screening Date** is the date that the accruing LAO or AO completed the *Screening Checklist* in Stars and obtained a Screening ID for the potential participant. Participants are screened in Stars after they sign the informed consent document.

## Enrollment Date

The **Enrollment Date** is the date that the accruing LAO or AO completed the *Enrollment Checklist* in Stars and obtained a Participant ID for the participant. Participants are enrolled in Stars after they meet protocol-specific eligibility criteria. The **Enrollment Date** is pre-populated on the *Registration/Randomization* eCRF in Medidata Rave.

## Start of Intervention Date

The **Start of Intervention Date** is the date that the participant started the protocol-defined study intervention (e.g., study agent, observation, behavioral intervention, etc.). This date is entered into the *Intervention Administration* eCRF in Medidata Rave.

**Note:** The AQuIP Zone Monitoring Report timeline provides a visualization of the duration of the actual participant accrual period to provide a comparison with the projected participant accrual period. The actual participant accrual period begins with the date that the first participant contact is made after the accruing LAO or AO is activated.
